(949) 351-9166 | Jax008@ucsd.edu | [linkedin.com/in/haolin-xie](https://www.linkedin.com/in/haolin-xie) | github.com/HaolinX

EDUCATION

University of California, San Diego
Bachelor of Science in Computer Science

09/2025 – Expected 06/2027
La Jolla, CA

San Francisco State University
Coursework toward B.S. in Computer Science; GPA: 3.96/4.00

07/2023 – 06/2025
San Francisco, CA

EXPERIENCE

Full-Stack (Cyber Security) Engineer
VisionX LLC

06/2026 – Present
Santa Clara, CA

- Strengthened backend security for a health application handling sensitive health data by identifying and remediating 26 known dependency vulnerabilities, upgrading 8 critical Python dependencies including Django and Pillow, and adding regression tests for image upload functionality
- Restored CI testing gates across the pull request workflow and integrated pip-audit and Dependabot for automated dependency security scanning, ensuring new vulnerabilities are monitored without disrupting the deployment pipeline
- Designed and implemented an extensible application-layer security monitoring framework from scratch, using a pluggable detector architecture with centralized SecurityEvent/Signal models and fail-open execution to prevent monitoring failures from affecting application availability
- Developed detectors for failed logins, unauthorized access attempts, and unauthorized sensitive-data access, with PHI-safe event logging that restricts recorded information to metadata; expanded the test suite from 211 to 290 tests, with all tests passing and measured monitoring overhead of approximately 0.0046 ms/request

Learning Assistant - CSC 215 Intermediate Programming
San Francisco State University

08/2024 – 06/2025
San Francisco, CA

- Guided 200+ students in solving Java programming problems, covering conditionals, control flow, and object-oriented design
- Debugged and resolved students' coding issues one-on-one, reinforcing concepts in exception handling, data structures, and object-oriented programming

Research Assistant

SoftCom Lab – Computer Science Department, Cal Poly Pomona

09/2021 – 06/2022
Pomona, CA

- Researched and implemented AI/ML algorithms for mobile app video content extraction, improving extraction accuracy through model evaluation and optimization
- Integrated trained AI models with a mobile application backend and deployed the system to a cloud environment, enabling real-time inference for end users

PROJECTS

CLI Password Manager | Node.js, MySQL, bcrypt, AES-256-CBC, Inquirer.js

07/2025 - 08/2025

- Developed a secure command-line credential manager with admin/guest role-based access control, encrypting all stored passwords using AES-256-CBC with keys managed via environment variables
- Implemented bcrypt-hashed admin authentication and an interactive CLI with Inquirer.js supporting full CRUD operations on a MySQL-backed credential vault; applied modular architecture with .env configuration and clean Git practices

RAG Chatbot | Node.js, MySQL, OpenAI API, Transformers.js, JWT, HTML/CSS/JS

02/2025 - 06/2025

- Built a full-stack Retrieval-Augmented Generation (RAG) web application that answers questions over uploaded PDFs using OpenAI API for response generation and Transformers.js for local document embedding and semantic search
- Implemented secure user authentication with JWT tokens and bcrypt-hashed passwords stored in MySQL, with connection pooling and SQL injection protection
- Developed backend routes for file uploads, PDF extraction, and persistent vector stores for retrieval over embedded chunks

Rz VideoCut | Android Studio, Dart, MediaPipe, Python

09/2021 - 07/2022

- Developed an AI-powered video editing app automating face-tracking and cropping using MediaPipe Face Detection with six landmarks and multi-face support, built cross-platform using Dart with UX/UI, and launched on App Store and Google Play
- Co-authored and presented “An Intelligent Video Editing Automate Framework using AI and Computer Vision” at the International Conference on Information Technology Convergence and Services (ITCSE 2022)
- Obtained U.S. Patent from the United States Patent and Trademark Office (USPTO), Jul. 2022

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, SQL, HTML/CSS, Bash

Frameworks & Libraries: Node.js, OpenAI API, Transformers.js, MediaPipe, Express.js, JWT, bcrypt

Developer Tools: Git/GitHub, MySQL, Android Studio, Linux, VS Code

Concepts: REST APIs, Retrieval-Augmented Generation (RAG), AES Encryption, Vector Embeddings, Semantic Search
